Pressure Vessel

A pressure vessel is a closed container designed to hold liquids, gases, or vapors at a pressure significantly different from the ambient pressure. These vessels are widely used in various industries to store, transport, or process substances under pressure. Examples include boilers, storage tanks, and reactors.

The membrane bioreactor (MBR) has developed as a cost-effective and compact wastewater treatment device for municipal and industrial applications.

- **Boilers:** Used to generate steam or hot water for various industrial and domestic applications.
-
- **Storage Tanks:** Used to store liquids, gases, or vapors at specific pressures.
-
- **Reactors:** Used in chemical and petrochemical processes to control reactions under pressure.
-
- **Heat Exchangers:** Used to transfer heat between fluids, often operating under pressure.
-
- **Distillation Towers:** Used in the separation of substances based on their boiling points, often involving pressure differentials.
-
- **Compressed Gas Cylinders:** Used to store and transport compressed gases.
